Math 7 Vocabulary Words

Coordinate grid   Cartesian plane   x-axis   y-axis

origin   quadrants   vertex   transformations

translation   reflection   rotation   vertices

estimate   order of operations   overestimate   underestimate

parallel   perpendicular   parallelogram   base

height   perpendicular bisector   angle bisector   square

triangle   rectangle   geometric figure   scalene triangle

equilateral triangle   isosceles triangle   percent   probability

outcome   favourable outcomes   independent outcomes   random

sample space   experimental probability   theoretical probability   divisible

common factor   lowest terms   numerator   denominator

fraction   mixed number   improper fraction   proper fraction

greatest common factor   multiple   common denominator   horizontal

vertical   diagonal   radius   diameter   circumference   pi

circle graph   sector   central angle   acute   obtuse   opposite integers

integers   whole number   zero pair   pattern   variable

expression   value   constant   numerical coefficient   table of values

linear relation   graph   relationship   equation   opposite operations

measures of central tendency   median   mode   mean   range   outlier
