

Science 8

## Poster Project

Name: \_\_\_\_\_

In Term 1 we investigated / covered the Biology curriculum. The following were the key components that were discussed.

### Life Processes are performed at the cellular level:

- Characteristics of Life
- Cell Theory and Types of Cells
- Photosynthesis and Cellular Respiration
- Relationship of Microorganisms with living things
- Basic functions of the immune system
- Vaccinations and antibiotics
- Impacts of epidemics and pandemics on human populations

#### Requirements:

- On a large piece of poster board or media of choice (any drawing program of choice)
- Large attractive title (coloured)
- Information is contained in "chunks", typed, thorough, and accurate ( check grammar and spelling )
- Colourful pictures relating to the topic ( at least 8 ) can be from the computer , but must be coloured ( no pencil visible of stick figures )
- Organized , neat layout
- Bibliography for informational sources that were used

This project is an excellent way for you to review previous material taught and demonstrate a solid understanding of the information. You will be given many classes to work on this project. Please make sure to review information from the previous terms off of the teacher blog as well as spend time researching information off of the internet before beginning the project.

You must submit rough work on a project at the end of each week for me to look at and record. I would encourage you to share your work with other classmates to look over and have them give you additional ideas.

This is an **individual project** that you will eventually submit, please include any individuals who you share your work with and gave you ideas

# RUBRIC Poster Project Biology

- 1) Title ( neat, big, colourful, ..... )
- 2) Pictures
  - related to topic
  - colourful
  - 8 pictures
- 3) Information
  - related to topic and accurate
  - thorough / detailed
  - spelling and grammar
- 4) Overall Appearance
- 5) Organization
